Samuel Casco

SOFTWARE ENGINEER | DISTRIBUTED SYSTEMS & FULL-STACK

Tegucigalpa, Honduras | sacasco99@gmail.com | linkedin.com/samuelcasco | github.com/smkod | smkod.github.io

Versatile **Software Engineer** with over 4 years of experience delivering high-impact solutions in Fintech and Telecom. Expert in the **TypeScript ecosystem (Node.js, NestJS, Angular, React)** and currently architecting distributed systems with **Go and AWS**. Proven track record of leading technical migrations, modernizing legacy infrastructures, and building scalable event-driven microservices. I bridge the gap between complex business logic and robust technical execution.

PROFESSIONAL EXPERIENCE

Independent Software Consultant
JAN 2026 — PRESENT

- Architecting specialized **Go (Golang)** microservices and designing **gRPC contracts** for high-performance, low-latency communication.
- Implementing modern web delivery with **Next.js** and orchestrating complex monorepo workflows using **Nx**.
- Designing data-driven features integrated with **PostgreSQL** and resource generation via **Large Language Models (LLMs)**.

Senior Front-End Lead | Banco Cuscatlán
MAY 2025 — JAN 2026

- Directed a cross-functional team of 4 engineers, providing technical leadership and mentoring to over 10 staff members in **GitFlow**, automation, and unit testing.
- Orchestrated the core platform migration from Angular 16 to 18, implementing **Signals** and **RxJS** to maximize rendering performance.
- Established strict quality standards and CI/CD pipelines by configuring **Husky and SonarQube** for automated PR validation.
- Collaborated with product stakeholders to translate complex banking requirements into technical roadmaps.

Senior Front-End Developer | Banco Cuscatlán
AUG 2024 — MAY 2025

- Architected the **"Matrix"** regional digital infrastructure, modernizing legacy systems using **Angular 18** and high-performance rendering strategies.
- Engineered banking modules for credit card flows, service payments, and secure account recovery processes.
- Reduced technical debt via **SOLID** principles and established framework-agnostic architectural patterns.

Full-Stack Software Engineer | TIGO Honduras (via BaaS Tech)
AUG 2022 — AUG 2024

- Architected event-driven microservices using **NestJS and Kafka** to handle massive mobile plan provisioning (thousands of concurrent events).
- Implemented **CassandraDB** to support high read/write volumes and **PostgreSQL** for relational data integrity.
- Contributed to the rebuild of an enterprise legacy B2B system using **Angular**, significantly improving UI/UX and maintainability.
- Championed a culture of testing and automated linting (**Jest, ESLint**), ensuring production-grade delivery across distributed systems.

TECHNICAL SKILLS

BACKEND
Node.js, NestJS, Go (Golang), Microservices, gRPC, Kafka, REST APIs.

DATABASES
PostgreSQL, CassandraDB, MongoDB, MySQL.

FRONTEND
Angular (Signals/RxJS), React, Next.js, TypeScript, Tailwind CSS.

CLOUD & DEVOPS
AWS (ECS, S3), Docker, Nx Monorepo, GitHub Actions, SonarQube.

EDUCATION

UNAH - B.S. in Computer Science / IT | 2023

LANGUAGES

Spanish: Native | **English:** Fluent (B2+) | **Portuguese:** B1
